1 What will be the output of the following code snippet?

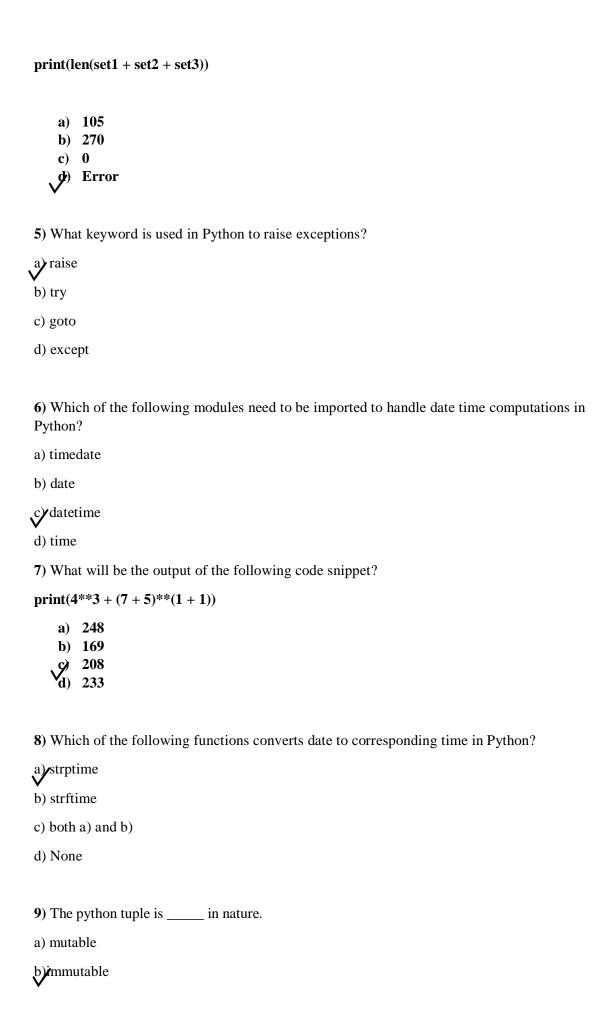

```
def func(a, b):
  return b if a == 0 else func(b % a, a)
print(func(30, 75))
```

- a) 10
- **b)** 20
- $\begin{pmatrix} 0 & 15 \\ d & 0 \end{pmatrix}$

- a) Int
- b) Filter c) List
- d) Tuple
- 3) As what datatype are the *args stored, when passed into
- a) Tuple
- b) List
- c) Dictionary
- d) none

4)
$$set1 = \{14, 3, 55\}$$

$$set2 = \{82, 49, 62\}$$

| c)unchangeable |
|--|
| d) none |
| |
| |
| 10) |
| The is a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop. |
| A range() B. set() C. dictionary{} D. None of the mentioned above |
| Question 11 |
| Amongst which of the following is a function which does not have any name? |
| A. Del function B. Show function C. Lambda function D. None of the mentioned above |
| Question 12 |
| The module Pickle is used to |
| A. Serializing Python object structure B. De-serializing Python object structure Q. Both A and B D. None of the mentioned above |
| Question 13 |
| Amongst which of the following is / are the method of convert Python objects for writing data in a binary file? |
| A. set() method P. dump() method C. load() method D. None of the mentioned above |

e? A

| Amongst which of the following is / are the method used to unpickling data from a binary file |
|---|
| A. load() B. set() method C. dump() method D. None of the mentioned above |
| 15. |
| A text file contains only textual information consisting of |
| A. Alphabets B. Numbers C. Special symbols D. All of the mentioned above |
| 16 |
| Which Python code could replace the ellipsis () below to get the following output? (Select all that apply.) |
| captains = { |
| "Enterprise": "Picard", |
| "Voyager": "Janeway", |
| "Defiant": "Sisko", |
| } |
| Enterprise Picard, |
| Voyager Janeway |
| Defiant Sisko |
| a) for ship, captain in captains.items(): |
| print(ship, captain) |
| b) for ship in captains: |

print(ship, captains[ship])

c) for ship in captains:

```
print(ship, captains)

both a and b
```

17)

Which of the following lines of code will create an empty dictionary named captains?

```
a) captains = {dict}b) type(captains)c) captains.dict()d) captains = {}
```

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
b) captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
c) captains = {
    "Enterprise": "Picard",
    "Voyager": "Janeway",
    "Defiant": "Sisko",
}
```

d) None of the above

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
print(f"The {ship} is captained by {captain}.")
d) All are correct
```

20)

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
}
```

What statement will remove the entry for the key "Discovery"?

- a) del captains
- b) captains.remove()
 del captains["Discovery"]
 d) captains["Discovery"].pop()
